Technical Skills

Html - Css - Javascript - Git - Github - Microsoft Office

About Me

Problem solving has always been something I have enjoyed. Going down my coding journey is perfect because there is always going to be newer and harder problems to solve. That is the most exciting part for me going down this career path. I also believe that as a developer your goal is to always optimize and simplify things which fits my life motto "Work smarter not harder".

Below you will find some of the projects I've completed on my journey so far.

Projects

Trivia W/ Friends ([Github/Website](#)) Trivia game that allows the user to select guidelines for the quiz which utilizes a Trivia API with AJAX. Then the user is presented timed questions that are scored and saved locally on a leaderboard. Also utilizes Giphy API and a sound-bit library. Built using Html, Css, and Javascript.

Day Planner ([Github/Website](#)) Simple calendar app for scheduling your work day with clock and date using a library. Locally save notes in blocks for each hour of the day that change color to indicate current time. Built using Html, Css, Javascript.

House Hunter ([Github/Website](#)) Home search app allowing search criteria to pull from Zillow API. Create an account to save your favorite houses for the future and view the searched houses on an interactive map with pinned addresses. Built using Html, Css, Javascript, Auth0, and Mysql. **user:user@admin password: 1234**

Password Generator ([Github/Website](#)) Random password generator that prompts user for guidelines and produces a password meeting those specifications. Built using Html, Css, and Javascript.
